

Application No.: 10/623,106  
Group Art Unit: 2833

**Amendments to the Specification:**

Please replace paragraph 2 starting on page 1 line 8 with the following amended paragraph:

Card connectors for housing cards, such as Personal Computer Memory Card International Association (PCMCIA) cards (also referred to as Personal Computer cards or PC cards), are utilized in personal computers and the like. These card connectors typically include ejection means to eject the card, so that other cards may be used with the personal computer or the like. When a card is inserted into the card connector, it is undesirable to have a knob for ejecting the card protrude from the equipment in order to avoid inadvertent card ejection and to avoid breakage of the knob. For this reason, connectors with what is known as "push/push" type ejecting mechanisms are utilized, wherein during use of the card, the knob is pressed into the connector so as to not protrude from the equipment.
